We are looking for a world class **Unity3D Developer** to help us develop the next generation of mobile social games! We are looking for fun, energetic people who have a passion for building great products and bringing our games to life. So, if you think you have the chops to deliver something unique, come join us!

Responsibilities

- Code and develop new games and features such as gameplay, IAPs, prototypes, implementation of SDKs, etc.
- Inspire technical solutions while spearheading multiple games
- Review code and design decisions with teammates and propose changes and improvements to promote scalable, reliable, and maintainable technologies for our gaming platforms.
- Promote code maintainability, extensibility, and reusability across all mobile devices

- Provide feedback to help shape the final product of our games in terms of gameplay and user experience
- Monitor the technical performance of games including server code performance, server-client communication issues, bugs, and crashes.

Requirements

- Bachelors in Computer Science or equivalent quantitative field.
- 1+ years of experience in game development and Unity 3D (C#).
- Ability to solve complex problems with simple and optimal solutions.
- Strong empathy for users.
- Love and passion for mobile games.
- Ability to adapt to different game genres.
- Ability to create quick prototypes as per instructions.
- Ability to learn different technologies and programming languages quickly.
- Excellent written and verbal communication skills.
